

# Aerial / Drone Mapping

Orthomosaic maps, elevation data, aerial photography, and drone video for site monitoring, marketing, and pre-construction planning.

FAA PART 107 CERTIFIED

MAPPING • PHOTO • VIDEO

AS LITTLE AS 48-HR DELIVERY

## WHAT YOU GET

### Orthomosaic Maps

A single, geographically accurate stitched map built from a programmed grid flight — the same format surveyors and planners use to measure and mark up. The same flight path is repeatable for progress tracking over time.

### Elevation & Topographic Data

Point cloud and elevation models generated from the same flight data — useful for grading, drainage planning, and cut/fill estimates.

### Aerial Photography

High-resolution stills from angles a ground camera can't reach — roof and site inspection, listing marketing, or a straightforward visual record of current conditions.

### Aerial Video

Flyover and site-walkthrough footage, shot and delivered ready for a marketing reel, an investor update, or a construction progress record.

## HOW IT WORKS

- 01 **The first call.** 20–30 minutes with the team doing the work, not a salesperson.
- 02 **Onsite capture.** Planned around how your building runs. You know who is on site and when.
- 03 **Processing.** Checked before anything goes out. You are not the quality control.
- 04 **Delivery.** Files in the formats you work in, plus a handoff call.

## TURNAROUND

**Capture to delivery in as little as 48 hours.**

## WHAT WE NEED FROM YOU

- The site address or boundary, and what you need from the flight.
- A site supervisor contact for active construction, so we fly around the work.
- For progress tracking: how often you want the same flight repeated.

## NOT INCLUDED

- Interior capture. Pair it with Matterport or Scan-to-BIM.
- Stamped or certified land surveys.

## CERTIFICATIONS

**FAA Part 107 Certified Pilot**  
**OSHA 10+ Certified**

**“Their attention to detail on aerial mapping work is unmatched — exactly the standard a construction timeline needs.”**
